OUNEVA
OUNEVA GROUP

You will find Ouneva connectors comprehensively from electrical wholesalers selection! Get familiar with Ouneva pruducts online: www.ounevaproducts.fi

Ouneva Group

Ouneva Group is an international contract manufacturer and R&D partner for a wide range of industries. Constant development, quick and flexible decision-making, and efficient production processes form the foundation of our successful operations. With our strong attitude, we make top quality products and exceed customer expectations.

Our wide technology portfolio covers the manufacturing processes of metal, plastic, electronics and plating in contract manufacturing. Our cutting-edge expertise extends from extremely accurate measuring devices used in the medical industry to high-tech speaker components used in professional studios and to electrical systems used in the mining industry.

Learn more about Ouneva Group: www.ounevagroup.fi

Ouneva Oy

Ouneva Oy is an international manufacturer of electrical connectors with a long history of excellence. We are specialised in connection technology. We provide standard products as well as customer specified solutions.

We offer sheet metal production to the electronics, mechanical engineering and electrical industries. Our production is scalable from individual components to complex assemblies. Our expert DFM design service ensures the best functionality, efficient manufacturing and cost-effectiveness.

Copper cable lugs

PK-series

General/use: Ouneva copper cable lugs designed for connecting copper cables, coils and busbars. Cable lugs are also compatible with PEX cables. Installation of the cable lugs can be performed with the most basic crimping tools (**see page 9**). PK-series cable lugs are compatible with all kinds of stranded (also compacted) wires.

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

Certification and applied regulations:
UL 486A-486B

Copper cable lugs

PKD-series

General/use: PKD-series cable lugs are compatible with compressed copper wires. Inner and outer dimensions are smaller in size compared to PK-series. Installation of the cable lugs can be performed with the most basic crimping tools (**see page 9**).

Materials: The lugs are manufactured of 99,9 % pure copper and electrolytically coated with tin.

Copper cable lugs

PKK-series angle cable lugs

General/use: Angle cable lugs are designed for connecting copper cables, coils and busbars. Lugs are compatible with all kinds of stranded (also compressed) wires. PKK-series cable lugs are available with both 90° and 45° angle. When installing PKK-series cable lugs, use installation instructions provided for PK-series copper lugs (**see page 9**).

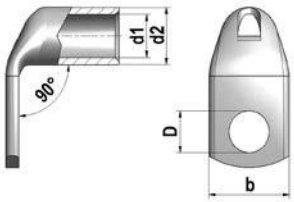

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

90° angle cable lugs

JH Splice sleeves & RJ parallel sleeves

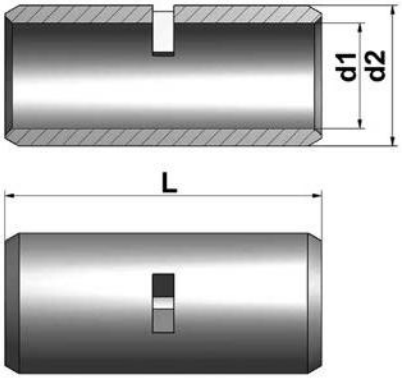

General/use: Splices and parallel sleeves are designed for extending and branching of copper cables and coils. Ouneva's sleeves are also compatible with PEX cables. Installation of the sleeves can be performed by the most basic crimping tools (**see page 11**).

Materials: The connectors are manufactured of 99,9 % pure copper and are electrolytically coated with tin.

Splice connector for unstripped cable

General/use: Shear bolt splice connector can be used for unstripped cables in ingress protection demanding conditions. Assembly includes 400 mm fine stranded conductor. IP43 protection class.

Materials: PC/Tin plated aluminium

Screw cable lug

General/use: Screw cable lug is designed for connecting copper wires. It can be installed without any special tools. Tightening screws and the bracket are made of steel and plated with zinc.

Materials: The lug is made of 99,9 % pure copper and electrolytically coated with tin.

Aluminium cable lug OLA

General /use: OLA aluminium cable lugs are designed to be used when connecting aluminium cables. Connectors are delivered with a conical washer and a flat pressure washer. OLA connectors can also be connected to tin-plated, silver-plated and unplated copper busbars if joint grease is used. Connectors are also compatible with PEX cables. Installation of OLA connectors can be made with tested and approved crimping tools.

Materials: Cable lugs are manufactured of aluminium.

Aluminium splice connector OJA

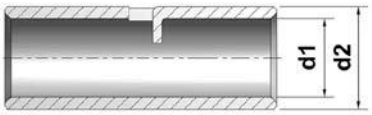

General/use: OJA splice connector is a crimping-type connector designed to be used when extending aluminium cables. Connectors are also compatible with PEX cables. Installation of OJA connectors can be made with tested and approved crimping tools.

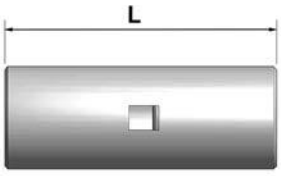

Materials: Connectors are manufactured of aluminium.

Al/Cu bi-metal cable lug OSCU

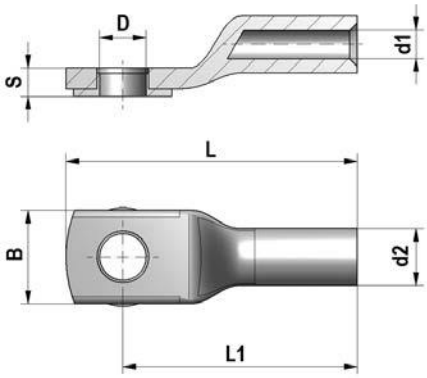

General/use: OSCU Al/Cu bi-metal connector is a crimping-type cable lug for aluminium cables. OSCU connector can be directly connected to tin-plated, silver-plated and unplated copper busbars in damp locations. OSCU connectors are delivered with a conical washer and a flat pressure washer. Connectors are also compatible with PEX cables. Installation of OSCUs can be made with tested and approved crimping tools.

Materials: Connectors are manufactured of aluminium and tin plated copper.

Shear bolt cable lug ROLA

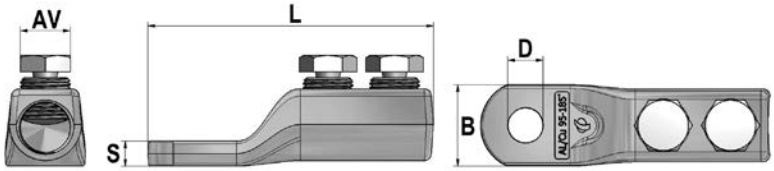

General/use: ROLA shear bolt cable lugs are designed to be used with aluminium and copper cables. Joint is made with shear bolts, which makes installations permanent.

Materials: Connectors are made of aluminium and plated with tin. Shear bolts are made of tin plated brass.

Al/Al Shear bolt splice connector

General/use: Shear bolt splice connector are designed for extending aluminium cables within the size range from 16 to 300 mm². Joint is made with shear bolts which makes installations permanent. Contact surfaces are treated with a corrosion preventing grease.

Materials: Splice connectors are made of unplated aluminium.

Standard: EN IEC 61238-1-1:2019

Product documents

VB04-0015

Low Voltage cable joint package

General/use: Package includes connectors and accessories for connecting 4- or 5- conductor systems. Screw connectors can be used for example AXMK cable connections. Screw connectors are pretreated with connection grease for the corrosion prevention. Installation is made with shear head screws (excl. 1,5-6 connectors which are installed with crimping tools and 6-25 connectors which are installed with allen key). VB04-0031 package includes connectors and shrink tubes for connecting 4- or 5-conductor <1kV Voltage copper cables.

Materials:
Connectors: Aluminium
(VB04-0031: Tin plated copper)
Heat shrink tubes: Modied Polyethylene

Certification and applied regulations:
EN 61238-1:2003

Al/Cu Shear bolt splice connectors

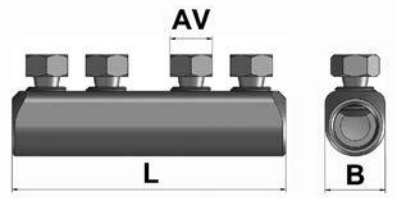

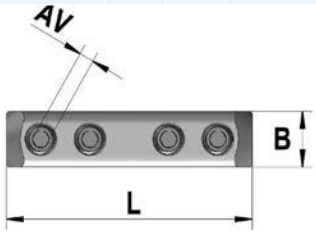

General/use: Shear bolt splice connectors are suitable for aluminium and copper conductors. Stranded, sector shaped and circular conductors are allowed. The installation can be performed with shear head screws. Connector includes dividing wall so it is suitable for aluminium cable and copper cable coupling.

Materials: Splice connectors are made of tin plated aluminium

Standards: EN IEC 61238-1-1:2019

Universal connector - OL-series

General/use: Ouneva OL-connectors are designed for connecting aluminium and copper cables (6–300 mm²). Installation can be performed without any special tools.

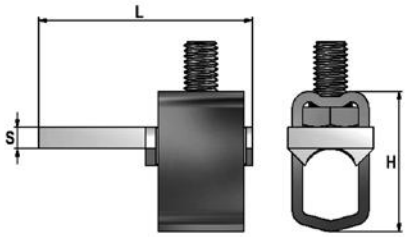

Materials: Connectors are made of stainless steel and copper.

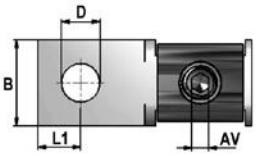

Certification and applied regulations:
UL 486E

Product documents

Insulated universal connector - OLE-series

General/use: Universal connectors with insulation. OLE connectors are same as OL-connectors (**page 20**) but supplied with insulated mountings and covers. Several connectors can be mounted alongside by fastening mountings with screws to each other. OLE-connectors have screw mounting.

Materials:
Connector frame: Stainless steel,
busbar of tin plated copper
Busbar: Tin plated copper
Housing: Polycarbonate and polypropylene

Insulated universal connector - OTE-series

General/use: Ouneva OTE-connectors are designed to be used when connecting aluminium and copper cables (1,5–300 mm²). OTE-connectors are same products as OT-connectors (**page 21**), but supplied with insulating mountings. OTE-connectors have screw mounting. Several connectors can be mounted alongside by fastening mountings with screws to each other.

Materials:
Connector: Tin plated aluminium
Insulating base: Polyamide

OTL 1000 V

General/use: New OTL 1000 V connector series offers the best quality, safety and installation features on the market. OTL-connectors are designed to be used when connecting and branching aluminium and copper cables.

Materials: Bodies of the connectors are made of aluminium and plated with tin. Insulating covers are made of UL 94 V-0 class polyamide.

Certification and applied regulations:
EN 60947-7-1:2009, EN 61238-1:2003

Six reasons to choose OTL 1000 V

Material classification according to UL 94 standard (vertical burning test)

Criteria Conditions	94V-0	94V-1	94V-2
Total flaming combustion for each specimen	≤ 10 sec	≤ 30 sec	≤ 30 sec
Total flaming combustion for all 5 specimens of any set	≤ 50 sec	≤ 250 sec	≤ 250 sec
Flaming and glowing combustion for each specimen after second burner flame application	≤ 30 sec	≤ 60 sec	≤ 60 sec
Cotton ignited by flaming drips from any specimen	No	No	Yes

Product documents

Certification and product safety

When choosing electrical connector, always make sure to select reliable and safe, certified connector. The requirements for connectors used with copper conductors inside switchgears and similar appliances are specified in standard EN 60947-7-1:2009.
All connectors used inside switchgears or similar appliances must fulfil these requirements.

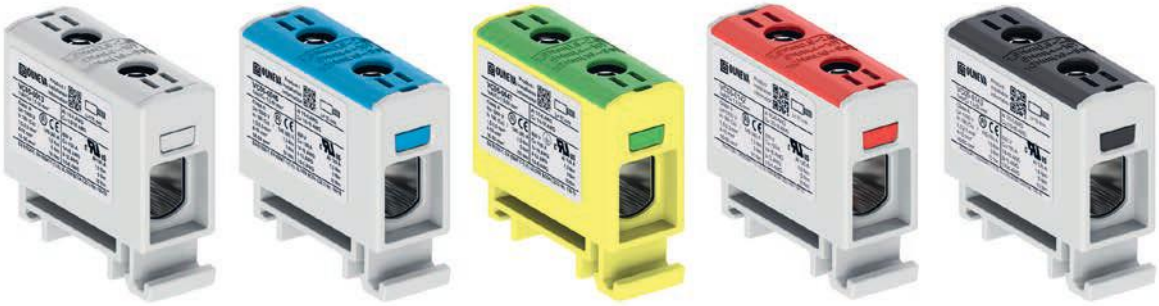

The requirements for connectors designated to be used with aluminium power cables are specified in standard EN 61238-1:2003. Connectors that have been tested and certified in accordance with standard EN 61238-1:2003 are divided into two classes.

- Class A (short circuit tested) - usage examples: feed-in connections, switchgears/appliances, universal
- Class B (not short circuit tested) - usage limited only to special circuits protected by fast-acting fuses

Ouneva OTL-connectors are tested and certified class A connectors, that are compatible with copper and aluminium conductors.

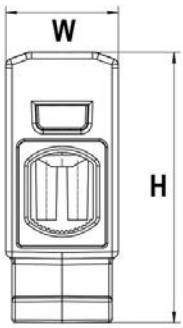

For choosing safe and reliable connector, always make sure that the terminal is equipped with CE and Class A markings with the symbol of certifying institute, for example FI -mark.

OJL distribution blocks

General/use: OJL distribution blocks are designed to be used when distributing power to several smaller wires. In all models, one input conductor can be installed, whereas the number of output conductors is six (6), seven (7) or 11 between the connector models. The material of input cable can be aluminium or copper. Output wirings can be only done with copper conductors.

Materials: Bodies of the connectors are made of aluminium and plated with tin. Insulating covers are made of polyamide.

Certification and applied regulations:
EN 60947-7-1:2009, EN 61238-1:2003

Product documents

Certification and product safety

When choosing electrical connector, always make sure to select reliable and safe, certified connector. The requirements for connectors used with copper conductors inside switchgears and similar appliances are specified in standard EN 60947-7-1:2009. All connectors used inside switchgears or similar appliances must fulfil these requirements.

The requirements for connectors designated to be used with aluminium power cables are specified in standard EN 61238-1:2003. Connectors that have been tested and certified in accordance with standard EN 61238-1:2003 are divided into two classes.

- Class A (short circuit tested) - usage examples: feed-in connections, switchgears/appliances, universal
- Class B (not short circuit tested) - usage limited only to special circuits protected by fast-acting fuses

Ouneva OJL-connectors are tested and certified class A connectors, that are compatible with copper and aluminium conductors.

For choosing safe and reliable connector, always make sure that the terminal is equipped with CE and Class A markings with the symbol of certifying institute, for example FI -mark.

OJL distribution blocks

OJL 135

NEW

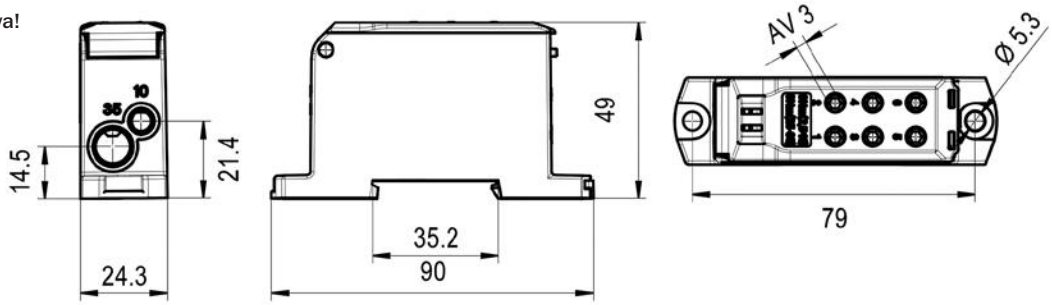

New OJL distibution block from Ouneva!
Suitable for series connection.

The single pole distribution block OJL 135 for branching connections. Distributes the current through 6 output cables.

Input wirings either 1x Al/Cu 2,5-35 mm² or 1x Al/Cu 2,5-10 mm². Output wirings 4x Cu (2,5-16 mm²), 2x Cu (2,5-10 mm²).

DIN-rail / screw mounting.

OJL distribution blocks

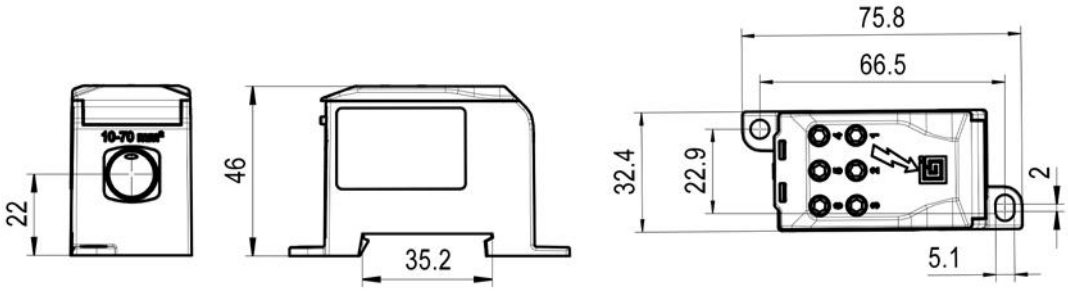

OJL 200

The single pole distribution block OJL 200 for branching connections. Distributes the current through 6 output cables.

Input wiring 1xAl/Cu (10-70mm²).
Output wirings 6xCu (2,5-16mm²).

DIN-rail / screw mounting.

STK code	Product code	Product name*	Input conductor (mm²)	Output conductor (mm²)	Un (V)	In (A) Al/Cu	Tightening torque	Weight (g)	Package (pcs)

OJL distribution blocks

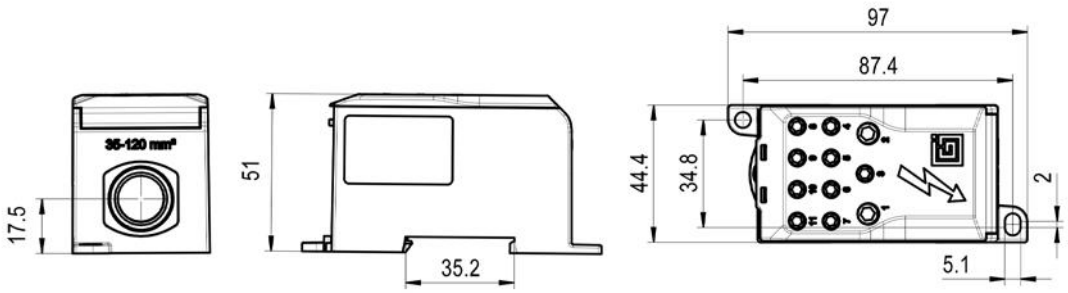

OJL 280

The single pole distribution block OJL 280 for branching connections. Distributes the current through 11 output cables.

Input wiring 1xAl/Cu (35-120mm²). Output wirings 2xCu (6-35 mm²), 5xCu (2,5-16mm²) and 4xCu (2,5-10mm²).

DIN-rail / screw mounting.

OJL distribution blocks

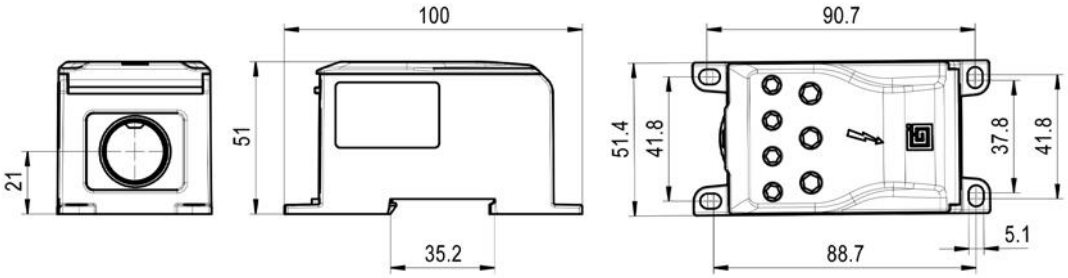

OJL 400 C/S

OJL 400 C and CS distribution blocks represent an option input for aluminium or copper cables with cross section range of 95-240mm^2. 400 C S model also include an option for cover sealing. The single pole distribution block OJL 400 C/S for branching connections.

Distributes the current through 7 output cables. Input wiring 1xAl/Cu (95-240 mm^2). Output wirings 3xCu (6-50 mm^2) / 4xCu (2,5-35mm^2)

DIN-rail / screw mounting.

STK code	Product code	Product name*	Input conductor (mm^2)	Output conductor (mm^2)	Un (V)	In (A) Al/Cu	Tightening torque	Weight (g)	Package (pcs)

OJL distribution blocks

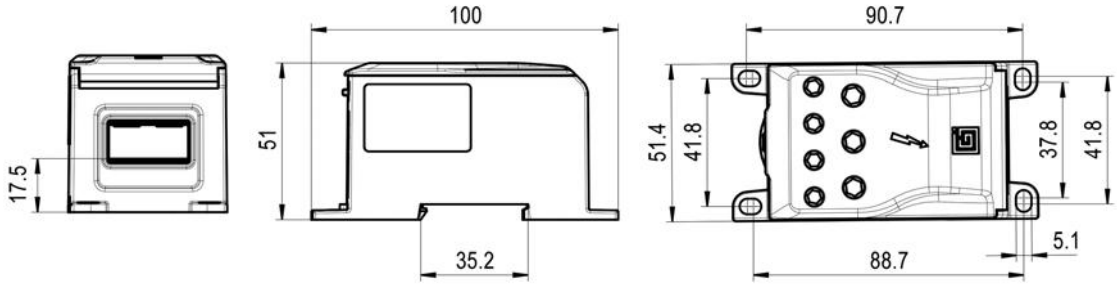

OJL 400 FBB/FBB S

OJL 400 FBB and FBB S distribution blocks represent an option for using flexible busbar as input. 400 FBB S and C S models also include an option for cover sealing. The single pole distribution block OJL 400 FBB for branching connections.

Distributes the current through 7 output cables. Input busbar Cu 10x(1x24). Output wirings 3xCu (6-50 mm^2) / 4xCu (2,5-35mm^2)

DIN-rail / screw mounting.

STK code	Product code	Product name*	Input conductor (mm^2)	Output conductor (mm^2)	Un (V)	In (A) Al/Cu	Tightening torque	Weight (g)	Package (pcs)

Terminal plate

General/use: Terminal plate is designed for connecting copper cables. Product is equipped with fastening snaps for insulating cover (available separately). Terminal plate can be mounted on DIN rail or with screws.

Materials: Connector parts are made of zinc plated steel and the insulating base is made of polyamide.

Certification and applied regulations:
EN 60947-7-1:2009

Product documents

Maximum number of conductors per one connection point.

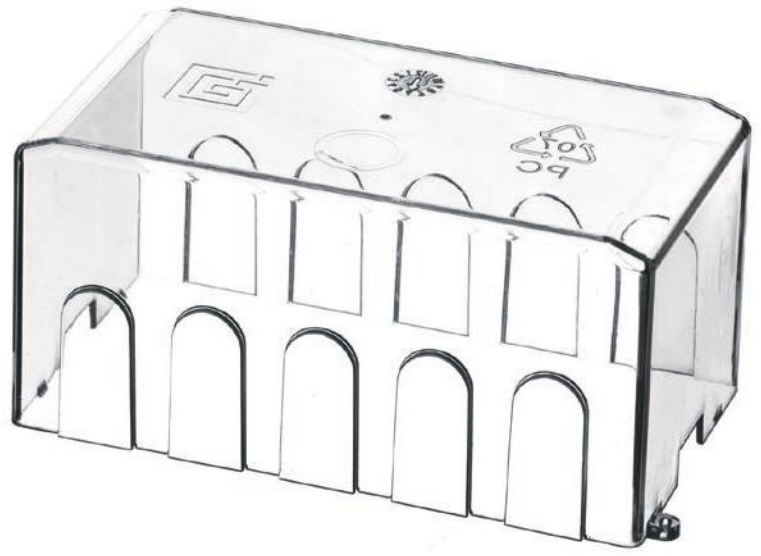

Conductor (mm^2)	Conductors max (No.)	Tightening torque

Product documents

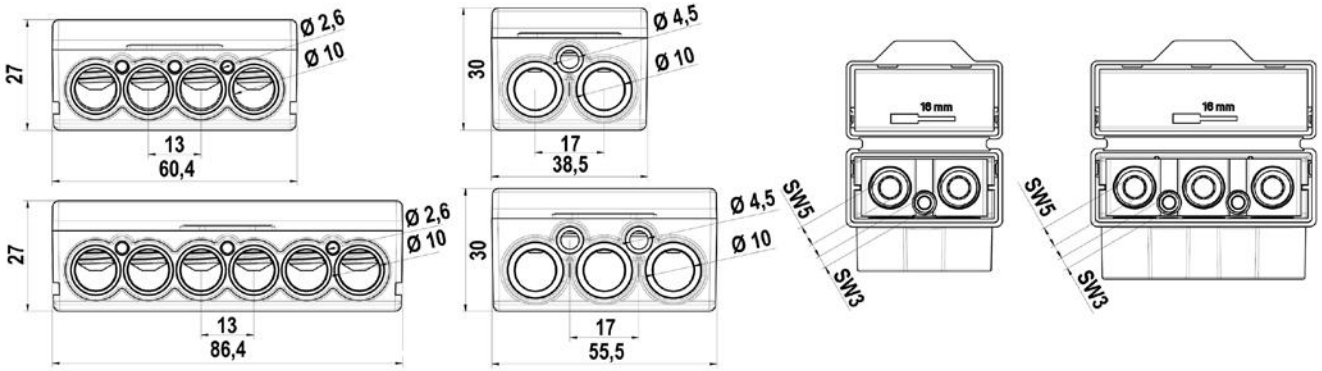

Pole branching connector

General/use: Pole branching connectors are designed to be used with both aluminium and copper cables. Several different connector kits available. Ask for more information from Ouneva sales. Connectors have from four to nine branching conductor inputs. IP23 can be achieved with adequate sized conductor in each slot. Sealing kit is available as accessory for IP33 sealing.

Materials: The material of the body and tightening screws is aluminium with tin plating. Plastic cover is made of polyamide.

Certification and applied regulations:
EN 60947-7-1:2009, EN 61238-1:2003;
EN 60529:1991 + A1:2000 + A2:2013

Pole branching connector kits

General: Connector package includes LED connectors for connecting 4 or 5 cabled pole systems, 350 mm / 16 mm² grounding cable with PK 16-6H fork cable shoe and 350 mm / 2,5 mm² black connector cable and fuse with base (excl. VC02-0071).

Use: Pole branching connector kit can be used with copper and aluminium cables. Kit is designed especially for lightning pole connections.

Materials: The material of the body and tightening screws is aluminium with tin plating. Plastic cover is made of polyamide.

Certification and applied regulations:
EN 60947-7-1:2009, EN 61238-1:2003;

PEN-connectors

General/use: PEN-connector, TN-C (PEN) system can be transferred into TN-S (PE+N) system by removing connector block. Terminal is designed to be used with both copper and aluminium cables. All connectors are equipped with two terminals for test leads. Connectors are screw mounted.

Flexible PEN-connector

Flexible PEN-connector is designed to be installed in busbar connecting N- and PE-conductors. Connector is used in situations where flexibility makes the installation easier.

Potential equalizer busbars

General/use: Potential equalizer busbars are used when connecting or assembling potential-equalizing cables. Busbars are mounted by screws.

Materials: Bodies and tightening screws of busbars are made of aluminium and plated with tin. Busbar supports are made of self-extinguishing polyamide.

Modular N/PE busbars

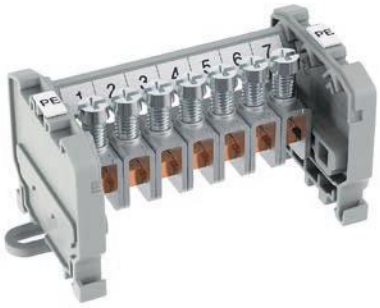

Ouneva N/PE-busbars are used in switchgears and other systems for neutral and safety grounding. Construction of busbar system is modular and allows client to order special configurations.

Quadrangular busbar (5x5 mm Cu) is compatible with 6 mm², 16 mm², 35 mm² connectors. Busbar supports are made of grey nylon.

Supports can be mounted with screws or DIN-rail. Nominal voltage of the systems is 600 V.

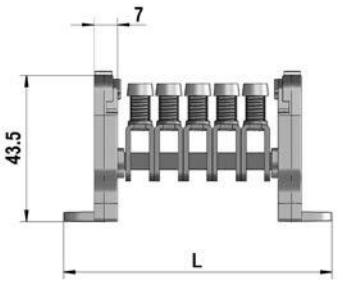

Ask for a specific assembly to meet your requirements!

Grounding busbars

Grounding busbars are manufactured of pure unplated copper. Busbars can be used for safety grounding in different circumstances. Connections are numbered by stamping. Insulator and fastening set are available separately.

Insulator and fastening packages

Insulators are made of halogen free polyester. Fastening pieces are zinc plated steel. Package includes two insulators, four DIN933 M10x20 bolts and four DIN125 M10 flat pressure washers. Fastening package includes 10 pcs of DIN933x30 screws, 20 pcs of DIN125 flat pressure washers and 10 pcs of DIN934 nuts. Accessory sizes of M8 and M10 available.

Cable terminal boxes

Product documents

GeneraL/use: Cable terminal boxes consists of two base frames and is dismountable. Terminal's two rubber seals are designed to fit two different cable diameter ranges a) Ø 40-52 mm and b) Ø 48-60 mm. A single terminal can accomodate two cables. The cable terminal boxes are modular in design and are ATEX certified. Accessories for cable terminal boxes: tension clamp, EMC kit, dismountable cover flange and acid-proof screws. The terminals can also be supplied with angled flanges (45°), which are used to change the angle of the incoming cables.

Materials: Die cast aluminium

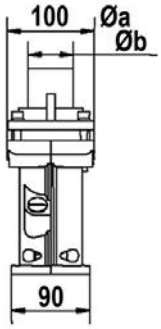

Certification and applied regulations: EN 60079-0, EN 60079-7, EN 60079-31

Flanges for switchgears

General/use: All aluminium flanges have class IP67 protection. Flanges fit into SFS 2528 -sized openings.

Materials: Flanges are made of aluminium and supplied with ATEX approved neoprene gasket.

Product documents

Aluminium flanges with threaded holes

Flanges are compatible with Ouneva sealing plugs, **check out page 53**. Counter nuts are not necessary during the installation of sealing plugs or cable glands.

Flexible busbars

General/use: Busbars are insulated and designed for distribution boards and electrical installation, which require them to be economic on space and easy to bend. Because of extremely high flexibility and durability of the insulator, the smallest bending radius of the busbar is 3 * total thickness with bending angle of 180°. We also supply flexible busbars with special requirements for installation holes and other dimensions.

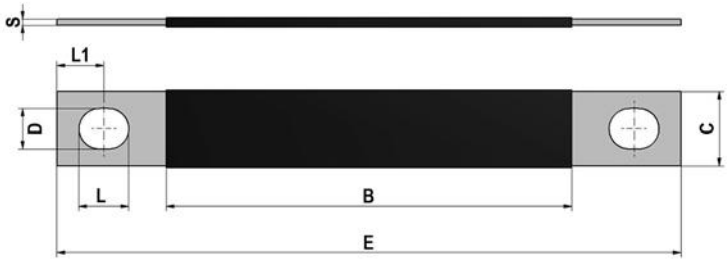

Materials:
Insulation is made of PVC.
Busbar is made of pure copper.

Certification and applied regulations:
EN 60439-1

Busbar system connectors

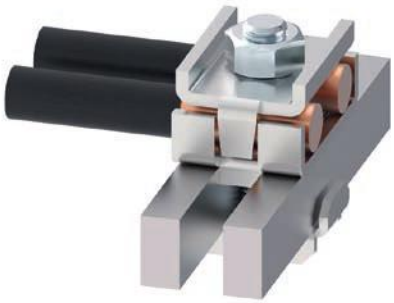

General/use: Connectors are designed for busbar systems to be installed on their side. Material of the busbars can be copper, aluminium or copper coated aluminium. With these connectors it is possible to connect copper cables, flexible busbars and other conductors to busbar systems. Matching support piece is needed if neutral (N) and protective earth busbar (PE) are combined. We also manufacture busbar connectors supplied with screws of custom length.

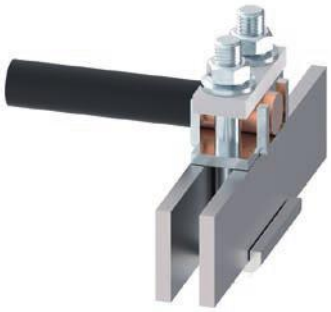

Materials: Zinc plated steel, tin plated copper

Aluminium connection rails

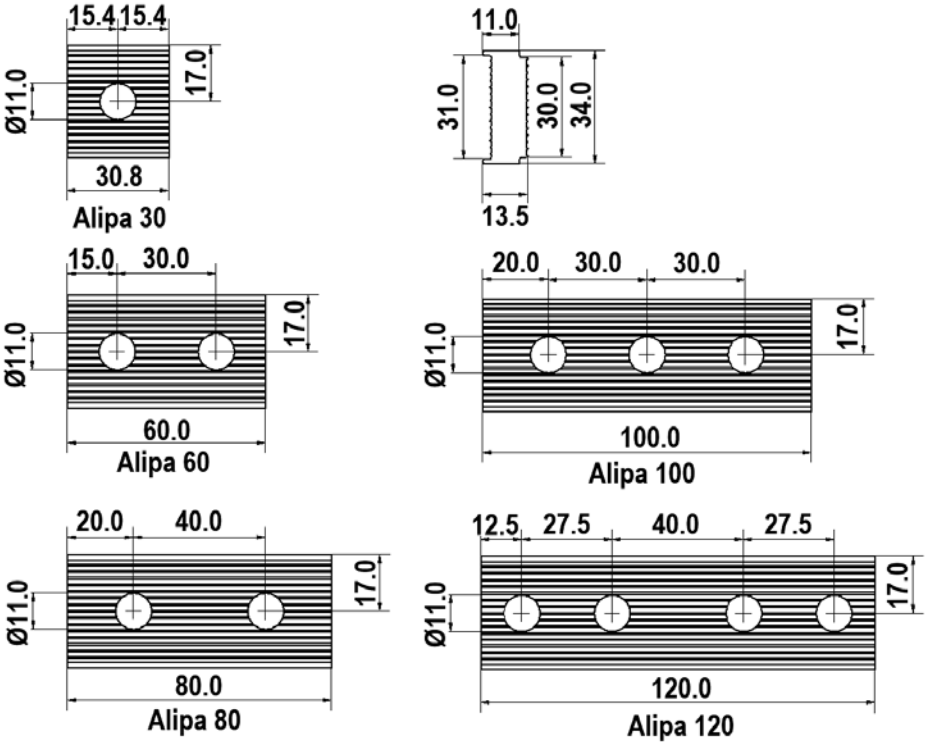

General/use: Aluminium connection rails are made for connecting different kinds of busbars. Unplated connectors can be used for connecting aluminium busbars. Tin plated busbar connectors are suitable for connecting aluminium and copper busbars.

Materials: Bare aluminium or tin plated aluminium

Overhead line accessories (AMKA-series)

Product documents

AMKA-products are designed for 0,4 kV overhead line systems. Nordic climate conditions and easiness of use have been considered in design. Products are tested and approved to meet the IEC regulations.

Parallel groove clamps and busbar clamp

General/use: Parallel groove clamps are used for the connecting and branching of aerial and other aluminium conductors in applications where no mechanical load is existent. All contact surfaces of the clamps are pretreated with contact grease, which makes installation easier. Clamp VF01-0003 is supplied with springs those make installation easier (clamp stays open if not tightened). Clamps can be supplied with insulating covers (**see page 63**). Busbar clamps are used for connecting cables in devices and special conditions. They are suitable for connecting cables in transformer poles.

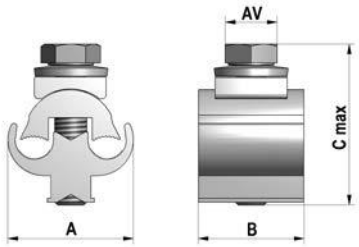

Materials: Clamps are made of aluminium and the steel bolts are hot-dip galvanized.

Suspension clamp

General/use: Suspension clamp is used for suspension of wires in overhead lines for straigt line sections and angles up to 90°.

Materials: The clamp is made of aluminium and steel parts are hot-dip galvanized. Clamp has a plastic cover part at the bottom that prevents wires to get damaged.

Product documents

Marking devices

General/use: Marking devices are suitable for different kinds of marking purposes in nature as well as in urban environment. The devices can be used for marking underground cables, pipes and sewers. Also the electric switching gears and pump stations can be easily marked with the devices.

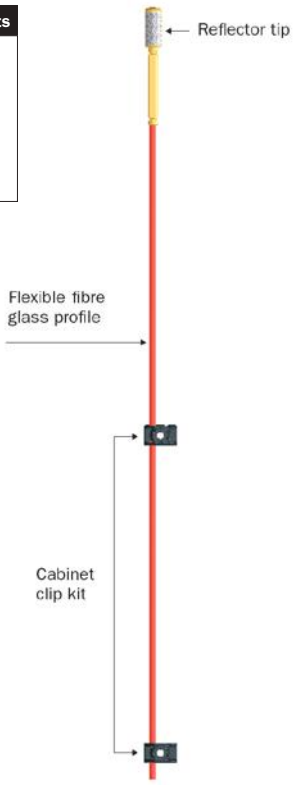

Materials: Marking device body is made of flexible fiber glass and the reflector of 3M Scotchlite reflective tape. Yellow plastic head is made of PeHD thermoplastic polymer which has an excellent UV durability.

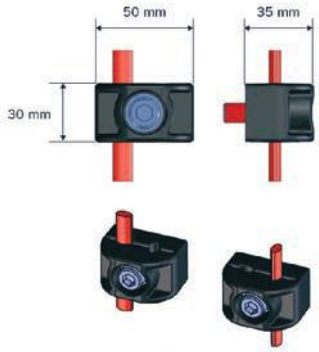

Switchgear marking devices

Product documents

Included accessories:
– Plastic fastening pieces
– Screws for M8/M10 fixation

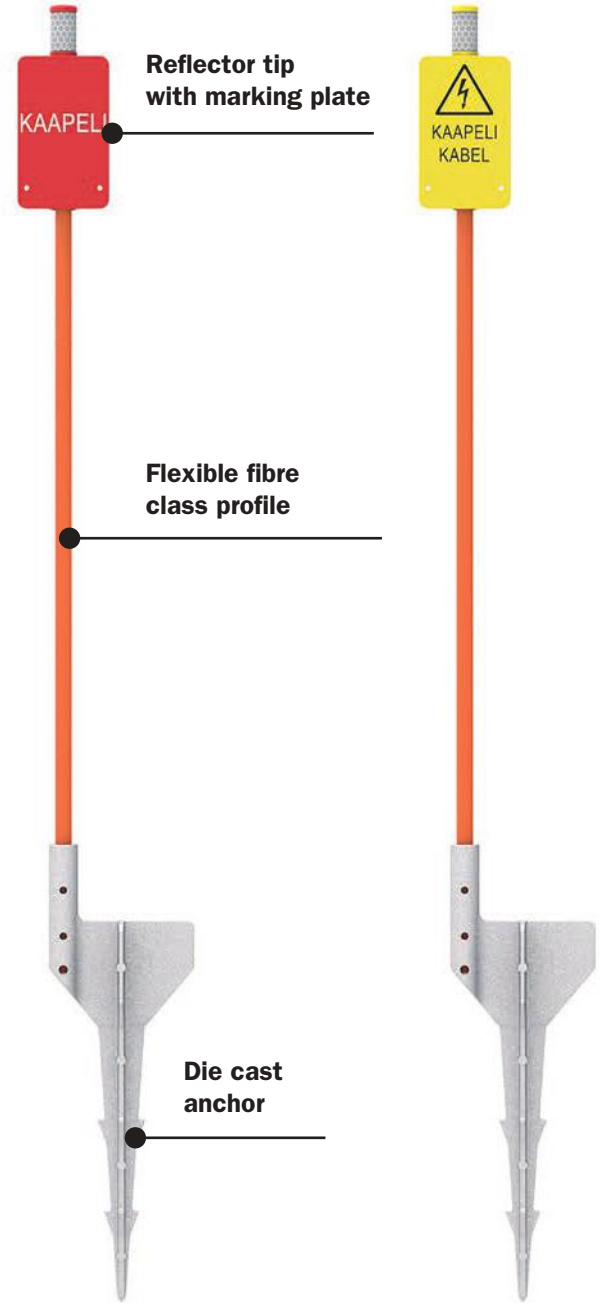

Marking devices

No more digging! Cable marking devices can be installed easily without any tools. Die cast aluminium head makes the installation easy in challenging grounds and high quality glass fiber shaft will last in rough weather conditions. Marking plate is visible in long distance thanks to the powerful reflector. Marking plate can be customized, ask more from Ouneva sales.

CERTIFICATE OF COMPLIANCE

Certificate Number	20180905-E324730
Report Reference	E324730-20180831
Issue Date	2018-SEPTEMBER-05
Issued to:	OUNEVA OY Teollisuustie 21 FI-82730 Tuupovaara FINLAND
This is to certify that representative samples of	COMPONENT - TERMINAL BLOCKS See Addendum Page
	Have been investigated by UL in accordance with the Standard(s) indicated on this Certificate.
Standard(s) for Safety:	UL1059 & CSA C22.2 No. 158-10, Terminal Blocks.
Additional Information:	See the UL Online Certifications Directory at www.ul.com/database for additional information

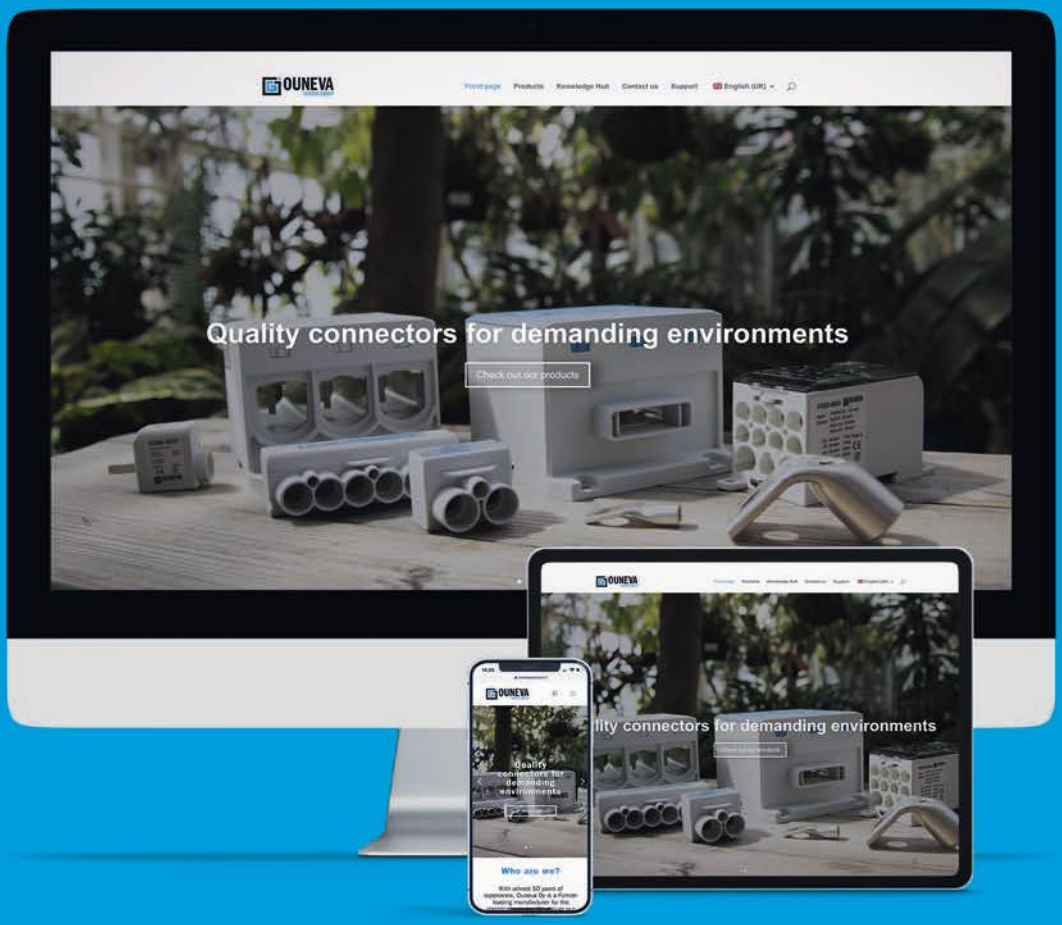

Only those products bearing the UL Certification Mark should be considered as being covered by UL's Certification and Follow-Up Service.

The UL Recognized Component Mark generally consists of the manufacturer's identification and catalog number, model number or other product designation as specified under "Marking" for the particular Recognition as published in the appropriate UL Directory. As a supplementary means of identifying products that have been produced under UL's Component Recognition Program, UL's Recognized Component Mark: ᵲᵲ, may be used in conjunction with the required Recognized Marks. The Recognized Component Mark is required when specified in the UL Directory preceding the recognitions or under "Markings" for the individual recognitions.

Recognized components are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon its installation and use in complete equipment submitted to UL LLC.

Look for the UL Certification Mark on the product.
