**SUSTAINABLE
SOLUTIONS
FOR THE FUTURE**

Ouneva Group

We are an international contract manufacturer and R&D partner. We offer sustainable solutions for a wide range of industries and the most demanding needs, our impact reaching all corners of the world. Our strengths lie in a unique technology portfolio, a dedicated and skilled staff, and a strong attitude. Working together, the courage to move forward, and the creation of the best solutions guide our work and define who we are.

Our wide technology portfolio covers the manufacturing processes of metal, plastic, electronics and plating in contract manufacturing. Our cutting-edge expertise extends from extremely accurate measuring devices used in the medical industry to high-tech speaker components used in professional studios and to electrical systems used in the mining industry.

Ouneva Group operates in Finland and Estonia. The group includes Alsiva, Ase Utra, Electro-Hill, Eswire, Jotwire, Ouneva, Top Speed, and Valukumpu.

Ouneva Oy

We are a strong, family-owned Finnish company with over 50 years of experience in manufacturing connectors and meeting the requirements of the electrical industry. We design and manufacture our high quality products in North Karelia, Finland. We also provide customer-specific connector and power supply solutions. We meet the strict requirements of the industry with our solid design and testing expertise, continuously developing our operations.

In addition to our own connector products, we are a contract manufacturer of sheet metal products for the electronics, machinery and electrical industries, to mention a few. Our deliveries scale from single components to complex, demanding system deliveries.

We bring added value to our customers through our experienced product design department that specializes in improving manufacturability. Our strong expertise ensures the best manufacturability, usability and safety of our products.

Latch keys	75
Enlosure hinges	75

Our products are tested and certified

Ouneva's connector products and power distribution solutions are tested and certified according to strict industry standards. Tested and certified products ensure operational and product safety, reliability, and compatibility.

- **Safety:** Certified products have undergone tests defined by standards, exceeding the mechanical and electrical requirements encountered in normal product use. Testing minimizes the risk of electrical fires, shocks, or other hazards.
- **Reliability:** During testing, products' mechanical and electrical characteristics are tested by aging the product for decades on an accelerated schedule to identify potential risk factors. Certification ensures that connectors are tested to withstand various environmental variables, such as temperature fluctuations, humidity, or vibration of the mounting base.
- **Compability:** Certified products are designed to meet industry-wide requirements. This ensures that different products are compatible in terms of characteristics with various systems and devices. Compatible products minimize the risk of various fault conditions and damage to the entire system or device.

All our products have clear installation guides to help you install our products safely and easily. You can always find information on which standards the product is certified to in our product information. For more information on individual products, please contact our product support if needed.

By choosing Ouneva's tested and certified connectors and power distribution solutions, you can be sure that:

1. The products have been tested according to industry requirements in accredited laboratories. They are of high quality and safe to use.
2. The risk of faulty conditions and damage to systems is minimized by testing products in extreme conditions. Correctly done installations are reliable and safe.
3. The product's service life and the reliability of the connections bring cost savings over the life cycle of the products.

CLASS A CONNECTORS ARE ALSO SHORT-CIRCUIT TESTED.

We recommend choosing a Class A connector

Connectors can be classified into two different classes, A and B. The difference between a Class A connector to Class B is that Class A connectors are also short-circuit tested. This means that Class A connectors have a much wider variety of usage compared to a Class B connector. Class A connectors are also more cost-efficient, considering that due to the short-circuit test they do not require separate quick circuit breakers. These circuit breakers are often expensive in acquiring and installation costs. We highly recommend that you choose a Class A connector to ensure the safety of the connector.

What other safety aspects should you consider when choosing a connector?

Material choices should be considered already in the design phase. Correct material choices influence the price, quality and recyclability of the product. They also make a significant impact on product safety, and especially fire safety, which is a significant part.

The OTL connector family is manufactured using plastic materials, whose fire rating fulfills the requirements of the UL 94 test standard V-0. V-0 classified materials do not boost fire and are self-extinguishing. The classified materials are tested by UL and a material certificate, a so-called "yellow card", is available for viewing. The fire rating has been accomplished without halogens, which means that the materials in the OTL connector family are completely halogen-free.

When connecting aluminum cables, the installation guide must be followed carefully

The recommended preparations for aluminium conductors are pre-rounding, greasing and brushing. First, remove the insulation and shape the cable into a round shape. Then grease the conductor and remove the oxidized layer from its surface, for example by brushing with a wire brush. Finally, install the conductor in the connector and check the conductor's fastening with a torque wrench.

Material classification according to UL 94 standard (vertical burning test)

Criteria Conditions	94V-0	94V-1	94V-2
Total flaming combustion for each specimen	≤ 10 sec	≤ 30 sec	≤ 30 sec
Total flaming combustion for all 5 specimens of any set	≤ 50 sec	≤ 250 sec	≤ 250 sec
Flaming and glowing combustion for each specimen after second burner flame application	≤ 30 sec	≤ 60 sec	≤ 60 sec
Cotton ignited by flaming drips from any specimen	No	No	Yes

Sustainable solutions for the future

Bronze in EvoVadis

Ouneva has been assessed through EcoVadis in 2024. We reached the bronze medal in the assessment, which means that our business belongs to the top 35% of all the 1,6 million companies assessed worldwide. EcoVadis is a corporate sustainability rating service that evaluates a company's sustainability in the areas of environmental efforts, ethics, labour and human rights, and sustainable procurement practices.

We have over 50 years of experience in manufacturing high quality connectors for the electrical industry. Our products are manufactured in North Karelia, Finland from European raw materials and we do the tin plating of the products ourselves, for example. The plastic and moulded parts of the connectors are also manufactured within Ouneva Group. We are responsible for the production process all the way from design to packaging and shipping.

We keep materials circulating

The recycling rate in 2023 for the whole Ouneva Group was **72%**. The recycling rate indicates how much of the waste generated is reused as a material. When the recycling rate is combined with the utilization of waste, for example by incineration for energy, this percentage rises to **97%**. This was our utilization rate in 2023.

We use raw materials efficiently to reduce material waste and our environmental impact. Most of our waste consists of metals (65%), which are recycled through our partners to get a new life. For example, scrap from Ouneva's sheet metal production is used as a raw material for new steel.

Towards more sustainable business

We are committed to conducting its business in a sustainable and responsible manner. For us, responsible business means the comprehensive development of operations, which considers the requirements of social, environmental, and financial responsibility.

Our goals are:

- **Well-being and motivated personnel**, as they are our most valuable resource. This will be achieved by further developing well-being, competence, and safety. We also aim to continue being an attractive workplace where everyone enjoys working.
- **Reducing our environmental impact**. In the future, our production will need to be less carbon-intensive than it is today. The environmental impact of production will be reduced by improving the energy efficiency of factories and using raw materials as efficiently as possible.
- **Profitable and reliable business partner** for our customers. We aim to provide them with high-quality products and to be their partner from the product development stage onwards. We are investing in the latest production technology, increasing automation, and boosting capacity.

We are also committed to international goals through the UN Global Compact initiative and by identifying the key areas of the UN Sustainable Development Goals (SDGs) relevant to our operations. We have been part of the Global Compact initiative since 2022.

The most relevant SDGs for our operations are:

Goal 8: Promote sustained, inclusive, and sustainable economic growth, full and productive employment, and decent work for all.

Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization, and foster innovation.

Goal 12: Ensure sustainable consumption and production patterns.

Goal 13: Take urgent action to combat climate change and its impacts.

Copper cable lugs and connectors

Copper cable lugs and connectors are made of 99,9% pure copper. The products are electroplated with tin at our own factory in Tuupovaara. The cable lugs and connectors are made to be used in connecting copper wires, coils and busbars. All the products can be installed with the most basic crimping tools. For more information on approved crimping tools, see our installation guide.

Product documents:

Copper cable lugs

PK-series

General/Use: Ouneva copper cable lugs are designed for connecting copper cables, coils and busbars. Cable lugs are also compatible with PEX cables. Installation of the cable lugs can be performed with the most basic crimping tools (see page 13). PK-series cable lugs are compatible with all kinds of stranded (also compacted) wires.

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

Certification and applied regulations: UL 486A-486B

Copper cable lugs

PKP-series

General/Use: PKP copper cable lugs are designed for connecting copper cables, coils and busbars. Cable lugs are also compatible with PEX cables. Installation of the cable lugs can be performed with the most basic crimping tools (see page 13). PKP-series cable lugs are compatible with all kinds of stranded (also compacted) wires and especially suitable for fine-stranded cables.

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

Copper angle cable lugs

General/Use: Angle cable lugs are designed for connecting copper cables, coils and busbars. Lugs are compatible with all kinds of stranded (also compressed) wires. PKK-series cable lugs are available with both 90° and 45° angle. When installing PKK-series cable lugs, use installation instructions provided for PK-series copper lugs (see page 13).

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

Copper cable lugs

PKD-series

General/Use: PKD-series cable lugs are compatible with compressed copper wires. Inner and outer dimensions are smaller in size compared to PK-series. Installation of the cable lugs can be performed with the most basic crimping tools (see page 13).

Materials: The lugs are manufactured of 99,9% pure copper and electrolytically coated with tin.

JH Splice sleeves and RJ parallel sleeves

General/Use: Splices and parallel sleeves are designed for extending and branching of copper cables and coils. Ouneva's sleeves are also compatible with PEX cables. Installation of the sleeves can be performed by the most basic crimping tools (see page 15).

Materials: The connectors are manufactured of 99,9% pure copper and are electrolytically coated with tin.

JHR Al/Cu splice connectors

General/Use: JHR-series Al/Cu splice connectors are designed for extending of aluminium and copper cables and coils. Installation of the splices can be performed by the most basic crimping tools.

Materials: The JHR connectors are manufactured of 99,9% pure copper and are electrolytically coated with tin. The raster mesh inside the tube is made of tin plated brass.

C-sleeves

General/Use: C-sleeves are designed for connecting, branching and extending of copper lines. Short-circuit tested connectors according the latest IEC 60947-7-2 and IEC 61238-1:2003 marked with **.

Materials: C-sleeves are manufactured of 99,9% pure copper.

Screw cable lug

General/Use: Screw cable lug is designed for connecting copper wires. It can be installed without any special tools.

Materials: The lug is made of 99,9% pure copper and electrolytically coated with tin. Tightening screws and the bracket are made of steel and plated with zinc.

STK code	Product code	Product name	Conductor (mm²)	L (mm)	L1 (mm)	D (mm)	Tightening screw	Weight (g)	Package (pcs)

Aluminium cable lugs and connectors

Aluminium cable lugs and connectors are made of uncoated aluminium, tin-coated copper or tin-coated aluminium. Uncoated cable lugs and connectors are for aluminium cables only and tin-coated for aluminium and copper cables.

All the screw-installed products come with pre-greased contact surfaces to make the installation simple. The installation can be done with product-specific crimping tools or a torque wrench.

Product documents:

Be sure to carefully prepare the aluminium conductors according to the installation guide before installation.

Also make sure that the material of the connector used is suitable for the conductor.

ALUMINIUM CABLE LUGS AND CONNECTORS

Aluminium cable lug OLA

General/Use: OLA aluminium cable lugs are designed to be used when connecting aluminium cables. In dry environments OLA connectors can also be connected to tin-plated, silver-plated and unplated copper busbars if joint grease is used. Connectors are also compatible with PEX cables. Installation of OLA connectors can be made with tested and approved crimping tools. Connectors are delivered with a conical washer and two (2) pcs of flat pressure washers.

Materials: Connectors are manufactured of aluminium.

Al/Cu bi-metal cable lug OSCU

CE

General/Use: OSCU Al/Cu bi-metal connector is a crimping-type cable lug for aluminium cables. Connectors are also compatible with PEX cables. OSCU connectors can be directly connected to tin-plated, silver-plated and unplated copper busbars in damp locations. OSCU connectors are delivered with a conical washer and two (2) pcs of flat pressure washers. Installation of OSCUs can be made with tested and approved crimping tools.

Materials: Connectors are made of aluminium and pre-installed copper ring is tin-plated.

Al/Cu Shear bolt cable lug ROLA

General/Use: ROLA shear bolt cable lugs are designed to be used with aluminium and copper cables. Joint is made with shear bolts, which makes installations permanent.

Materials: Connectors are made of aluminium and plated with tin. Shear bolts are made of tin-plated brass.

Standard: EN IEC 61238-1-1:2019

Al/Al Shear bolt splice connector

General/use: Shear bolt splice connectors are designed for extending aluminium cables within the size range from 6 to 300 mm². Joint is made with shear bolts which makes installations permanent. Contact surfaces are treated with a corrosion preventing grease. Installation is made with shear head screws (excl. 1,5–6 connectors which are installed with crimping tools and 6–25 connectors which are installed with allen key).

Materials: Splice connectors are made of unplated aluminium.

Standard: EN IEC 61238-1-1:2019

Low voltage cable joint packages

General/Use: Package includes connectors and accessories for connecting 4- or 5- conductor systems. Screw connectors can be used for AXMK cable connections, for example. Screw connectors are pre-treated with connection grease for corrosion prevention. Installation is made with shear head screws (excl. 1,5–6 connectors which are installed with crimping tools and 6–25 connectors which are installed with allen key). VB04-0031 package includes connectors and shrink tubes for connecting 4- or 5-conductor <1kV Voltage copper cables.

Materials: Connectors: Aluminium (VB04-0031: Tin-plated copper); Heat shrink tubes: Modied Polyethylene.

Standard: EN 61238-1:2003

Al/Cu shear bolt splice connectors

CE FI

General/Use: Shear bolt splice connectors are suitable for aluminium and copper conductors. Stranded, sector shaped and circular conductors are allowed. Connector includes dividing wall so it is suitable for aluminium cable and copper cable coupling from 6 to 300 mm². Installation is made with shear head screws (excl. 1,5–6 connectors which are installed with crimping tools and 6–25 connectors which are installed with allen key).

Materials: Tin-plated aluminium.

Universal connectors

Ouneva universal connectors are suitable for use in diverse applications. They can be used in connecting, as well as branching aluminium and copper conductors and cables as well as busbars. The universal connectors are tested and certified connectors up to 1500 volts. They are easy to install without special tools to ensure the best user experience.

Did you know that only one aluminium conductor can be connected in the same contact space and that you cannot mix conductor materials in the same contact space?

Product documents:

Ouneva OTL and OJL connector families are tested and certified (EN 60947-7-1:2009 and EN 61238-1:2003) Class A electrical connectors suitable for both copper and aluminium conductors. Be sure to carefully prepare the aluminium conductors according to the installation guide before installation.

OTL universal connectors

GENERAL/USE:

The OTL universal connectors offer the best quality on the market in addition to features, that increase the safety and ease of installation of the connectors and enable versatile end usage applications. Pre-greased contact spaces and the connection done with hex screws guarantee easy and quick installation. Tightening torques on the lid of the connectors make the installation easy, and component markers can be pressed onto the connectors. The compact size of the connectors enables efficient use of space even in constricted installation spaces.

OTL connectors are designed for connecting and branching aluminium and copper conductors.

MATERIALS:

The body is made of tin-plated aluminium. Housing is made of halogen-free UL94 V0-class polyamide.

STANDARDS:

EN 60947-7-1:2009, EN 60947-7-2:2009, EN 61238-1:2003, UL1059 and CSA C22.2 No 158-10.

Six reasons to choose OTL universal connectors

1

Higher
1000 V AC/ 1500 V DC
voltage rating

2

Tightening
torque labels on
the connector cover

3

Places for
component markers
(5 mm width
eg. Partex Tx)

4

Easier installation
with conductor
input collars

5

All five colours
UL- approved

6

Safe UL 94 V-0 class
plastic material

OTL PEN

OTL PEN universal connectors 2xAl/Cu 1,5–240 mm²

Branching connectors can be mounted on DIN rail or with screws (excl. VC05-0243).

Connectors can be used especially for grounding appliances in TN-C systems.

Screw/DIN-rail mounting.

Device connectors

Device connectors 1xAl/Cu 2,5 mm²–50 mm²

General/Use: Device connectors are designed to be used with aluminium and copper cables. Pre-greased installation spaces and the easy installation done with only allen bolts guarantee easy and quick connecting.

Materials: Body and screws from tin-plated aluminium, plastic cover is made from halogen-free, self-extinguishing PA66 94 V0-class polyamide.

Standards: EN 60947-7-1:2009, EN 61238-1:2003

OL universal connectors

General/Use: Ouneva OL universal connectors are a universal terminal series for connecting aluminium and copper conductors from 6 to 300 mm². They can be installed easily with a hex key.

Materials: The connector frames are made of stainless steel and the connector bars are made of tin-plated copper.

Standard: UL 486E

OT universal connectors

General/Use: OT universal connectors are designed for connecting aluminium and copper cables from 1,5mm² to 300mm². The installation can be performed without any special tools. OT universal connectors are suitable for connections in various electrical devices and systems.

Materials: Connectors are made of aluminium and plated with tin.

OLE insulated universal connectors

General/Use: Ouneva OLE connectors are universal connectors with insulation. OLE connectors are same as OL connectors but supplied with insulated mountings and covers. Several connectors can be mounted alongside by fastening mountings with screws to each other. Connectors are mounted by using screws. Connections can be done with cables from 25 mm² to 300 mm².

Materials: Connector frame: Stainless steel;
Busbar: Tin-plated copper; Housing: Polycarbonate and polypropylene.

OTE insulated universal connectors

General/Use: Ouneva OTE connectors are designed to be used when connecting aluminium and copper cables (1,5–300 mm²). OTE connectors are same products as OT connectors (page 27), but supplied with insulating mountings. OTE connectors are mounted with screws. Several connectors can be installed alongside by fastening mountings with screws to each other.

Materials: Connector: Tin plated aluminium;
Insulating base: Polyamide.

OJL distribution blocks

Universal branching connectors

Branching connectors are used for branching aluminium and copper cables. Our range includes safe and easy-to-install branching connectors suitable for constricted spaces, special circumstances and with a nominal voltage even up to 1000V.

Did you know that only one aluminium conductor can be connected in the same contact space and that you cannot mix conductor materials in the same contact space?

GENERAL/USE:

OJL distribution blocks offer the best quality on the market in addition to features, that increase the safety and ease of installation of the connectors and enable versatile end usage applications. Pre-greased contact spaces and the connection done with hex screws guarantee easy and quick installation. The compact size of the connectors ensures efficient use of space even in constricted installation spaces.

OJL distribution blocks are used for branching connections in electrical devices. OJL distribution blocks can be used with aluminium and copper wires. Installation can be done with screws or onto a DIN-rail. The OJL 80 & 135 distribution blocks can be

connected in series. In other models, the input is through one conductor. Outputs can be done between the connector models with 6, 7 or 11 conductors. Branching connections can be also done with input conductors up to 240mm² and busbars up to 10x(1x24).

MATERIALS:

The body of the distribution blocks is tin plated aluminium. Insulating cover is made from halogen-free UL 94 V0-class polyamide.

STANDARDS:

EN 60947-7-1:2009, EN 61238-1:2003

Six reasons to choose OJL distribution blocks

1

High nominal voltages
OJL80: 1000 V AC / 1500 V DC
Other models: 1000 V

2

Tightening torques on the connector covers (only in OJL 80 and OJL135 models)

3

Places for component markers 5 mm width eg. Partex Tx (only in OJL 80 and OJL 135 models)

4

Safe UL 94 V-0 class plastic material (in PA66 models)

5

Easy installation on DIN-rail or with screws

6

Extremely compact size enables connections in constricted spaces

Product documents:

OJL distribution blocks

OJL distribution blocks are designed to be used when distributing power to several smaller wires. In all models, one input conductor can be installed, whereas the number of output conductors is six (6), seven (7) or 11 between the connector models.

The input cable can be aluminium or copper. Output wirings can be only done with copper conductors.

OJL 80

The single pole distribution block OJL 80 for branching connections. Distributes the current through 6 output cables. Suitable for series connection. Input wirings 2x Al/Cu 2,5–16 mm². Output wirings 6x Cu (2,5–6 mm²).

DIN-rail mounting.

OJL distribution blocks

OJL 200

The single pole distribution block OJL 200 for branching connections. Distributes the current through 6 output cables. Input wiring 1xAl/Cu (10–70mm²). Output wirings 6xCu (2,5–16mm²).

DIN-rail / screw mounting.

OJL 400 C/S

OJL 400 C and CS distribution blocks represent an input option for aluminium or copper cables with cross section range of 95–240 mm². 400 C/S model also include an option for cover sealing. The single pole distribution block OJL 400 C/S for branching connections. Distributes the current through 7 output cables. Input wiring 1xAl/Cu (95–240 mm²). Output wirings 3xCu (6–50 mm²) / 4xCu (2,5–35 mm²).

DIN-rail / screw mounting.

OJL 400 FBB/FBB S

OJL 400 FBB and FBB S distribution blocks represent an option for using flexible busbar as input. 400 FBB S and C/S models also include an option for cover sealing. Distributes the current through 7 output cables. Input busbar Cu 10x(1×24). Output 3xCu (6–50 mm²) / 4xCu (2,5–35 mm²).

DIN-rail / screw mounting.

Terminal plates

General/Use: Terminal plates are designed for connecting copper cables. Product is equipped with fastening snaps for insulating cover (available separately). Terminal plates can be mounted on DIN-rail or with screws.

Materials: Connector parts: Zinc-plated steel; Insulating base: Polyamide.

Standards: EN 60947-7-1:2009

OPK pole branching connectors

General/Use: Pole branching connectors are designed to be used with both aluminium and copper cables. Connectors have from three to nine branching conductor inputs. IP23 can be achieved with adequate sized conductor in each slot. Sealing kit is available as accessory for IP33 class sealing. Several different connector kits are available. Ask for more information from Ouneva sales!

Materials: The material of the body and tightening screws is tin-plated aluminium. Plastic cover is made of polyamide.

Standards: EN 60947-7-1:2009, EN 61238-1:2003; EN 60529:1991 + A1:2000 + A2:2013

Pole branching connector kits

General/Use: Connector kits include LED connectors for connecting 4- or 5-cable pole systems, 350 mm / 16 mm² grounding cable with PK 16-6H fork cable lug and 350 mm / 2,5 mm² black connector cable and fuse with base (excl. VC02-0071). The kits are designed especially for lightning pole connections, enabling quick and easy installations in big projects.

Materials: The material of the body and tightening screws is tin-plated aluminium. Plastic cover is made of polyamide.

Standards: EN 60947-7-1:2009, EN 61238-1:2003; EN 60529:1991 + A1:2000 + A2:2013

Grounding ball studs

Grounding equipment

All our grounding accessories are made from high-quality materials, enabling you to achieve reliable and electrically safe grounding. Our grounding accessories are ideally suited for tasks such as creating neutral and protective grounding for distribution boards and switchgears.

General/Use: Grounding ball studs are used for safety grounding appliances in demanding applications.

Materials: Tin-plated copper.

Standards: IEC/EN 61230:2008 (5.7)

PEN connectors

OT PEN

General/Use: PEN-connector, TN-C (PEN) system can be transferred into TN-S (PE+N) system by removing connector block. Terminal is designed to be used with both copper and aluminium cables. All connectors are equipped with two terminals for test leads. Connectors are screw mounted.

Materials: Connection parts: Tin-plated aluminium; Connector housing: Polyamide.

Modular N/PE busbars

Ouneva N/PE-busbars are used in switchgears and other systems for neutral and safety grounding. Construction of busbar system is modular and allows client to order special configurations. Quadrangular busbar (5×5 mm Cu) is compatible with 6 mm², 16 mm², 35 mm² connectors. Busbar supports are made of grey nylon.

Supports can be mounted with screws or DIN-rail. Nominal voltage of the systems is 600 V.

Ask for a specific assembly to meet your requirements!

N/PE busbars

N/PE busbars include busbars, end supports, connectors and potential markings. Marking supports, finger guards and marking charts are available separately as accessories.

Insulator and fastening packages

Insulators are made of halogen free polyester. Fastening pieces are zinc plated steel. Package includes two insulators, four DIN933 M10×20 bolts and four DIN125 M10 flat pressure washers. Fastening package includes 10 pcs of DIN933×30 screws, 20 pcs of DIN125 flat pressure washers and 10 pcs of DIN934 nuts. Accessory sizes of M8 and M10 available.

Cable terminals

Our cable terminals and accessories provide a wide range of products. The protection and sealing of the products are excellent to ensure product safety. The products are ready for extreme conditions, where good sealing is imperative.

Product documents:

CABLE TERMINALS

IECEX / ATEX sealing plugs

IECEX/ATEX -sealing plugs are used for sealing threaded holes in explosive environments. Nickel plated brass made sealing plugs are delivered with EPDM seal which ensures perfect sealing in extreme conditions. Sealing plugs are available from M12 to M75 threads.

Cable terminal boxes

General/Use: Cable terminal boxes consist of two base frames and are dismountable. Terminals' two rubber seals are designed to fit two different cable diameter ranges a) Ø 40–52 mm and b) Ø 48–60 mm.

Materials: Die-casted aluminium.

Standards: EN 60079-0, EN 60079-7, EN 60079-31

Busbars and
system equipment

Busbars and system accessories have been designed for different installations and distribution boards, where space is limited. If you can't find the busbar or connector for your needs, please contact our sales department – we offer the possibility of customized products.

Product documents:

Flexible busbars

General/Use: Busbars are insulated and designed for distribution boards and electrical installation, which require them to be efficient on space and easy to bend. Because of extremely high flexibility and durability of the insulator, the smallest bending radius of the busbar is 3 * total thickness with bending angle of 180°. We also supply flexible busbars with special requirements for installation holes and other dimensions.

Materials: Insulation is made from HFFR plastic. Busbar is pure, unplated copper.

Standards: EN 60439-1 and SFS handbook 154, section 7.8.2.

Busbar system connectors

General/Use: Connectors are designed for busbar systems to be installed on their side. Material of the busbars can be copper, aluminium or copper coated aluminium. These connectors enable connecting copper cables, flexible busbars and other conductors to busbar systems. Matching support piece is needed if neutral (N) and protective earth busbar (PE) are combined. We also manufacture busbar connectors supplied with screws of custom length.

Materials: Zinc-plated steel, tin-plated copper.

STK code	Product code	Product name	Conductors max (mm²)	Weight (g)	Package (pcs)
19 141 49	VE02-0009	KL2M10	150	143	100

Aluminium connection rails

General/Use: Aluminium connection rails are made for connecting different kinds of busbars. Unplated connectors can be used for connecting aluminium busbars. Tin-plated busbar connectors are suitable for connecting aluminium and copper busbars.

Materials: Bare aluminium or tin-plated aluminium.

Overhead line accessories (AMKA-series)

Our overhead line accessories are designed for connecting and ending 0,4 kV low-voltage cables (AMKA bundle assembled aerial cable). The AMKA products are high-quality, easy to install and designed for Nordic climate conditions.

Product documents:

AMKA-products are designed for 0,4 kV overhead line systems. Nordic climate conditions and easiness of use have been considered in design.

Products are tested and approved to meet the IEC regulations.

Parallel groove clamps and busbar clamp

General/Use: Parallel groove clamps are used for connecting and branching of aerial and other aluminium conductors in applications where no mechanical load is existent. All contact surfaces of the clamps are pre-treated with contact grease, which makes installation easier. Clamp VF01-0003 is supplied with springs that make installation easier (clamp stays open if not tightened). Busbar clamps are used for connecting cables in devices especially in special conditions. They are suitable for connecting cables in transformer poles.

Materials: Clamps are made of aluminium and the steel bolts are hot-dip galvanized.

Parallel groove clamps

Overhead line accessories (AMKA products)

Suspension clamp

General/Use: Suspension clamp is used for suspension of wires in overhead lines for straight line sections and angles up to 90°.

Materials: The clamp is made of aluminium and steel parts are hot-dip galvanized. Clamp has a plastic cover part at the bottom that prevents wires to get damaged.

STK code	Product code	Type	A (mm)	B (mm)	C (mm)	AV (mm)	Tightening torque	Weight (g)	Package (pcs)

50 403 47	VF05-0002	Dead-end clamp 25-95 mm²	44 Nm (25-95 mm²)	528	25

Branching cabinets and marking devices

Our branching cabinets are made of durable, galvanized steel and finished with a high-quality powder coating. We manufacture the cabinets in three different colours. They are available furnished or with just a mounting plate. Our easy to install and weatherproof marking accessories are ideal for durable and clear marking of underground cables, pipes, sewers, cabinets and stations.

Product documents:

Branching cabinets

General/Use: Branching cabinet includes adjustable chassis, hinged door with K10 -type lock, grounding cable and connectors. Three powder coated basic colour options available: RAL 7037, RAL 7008 or RAL 7024. Ask for special colours from Ouneva sales!

Materials: Cabinet is made of zinc-plated steel.

Standards: EN 61439-1/61439-5

Marking devices

General/Use: Marking devices are suitable for different kinds of marking purposes in nature, as well as in urban environments. The devices can be used for marking underground cables, pipes and sewers. Also the electric switching gears and pump stations can be easily marked with the devices.

Materials: Marking device body is made of flexible fibre glass and the reflector of 3M Scotchlite reflective tape. Yellow plastic head is made of PeHD thermoplastic polymer which has an excellent UV durability.

Switchgear marking devices

STK code	Product code	Product name	Weight (g)	Package (pcs)

Cable marking devices

No more digging! Cable marking devices can be installed easily without any tools. Die-casted aluminium head makes the installation easy in challenging grounds and high quality glass fibre shaft will last in rough weather conditions. Marking plate is visible in long distance thanks to the powerful reflector. Marking plate can be customized. Ask more from Ouneva sales.

Enclosure accessories

From our wide range of accessories, you will find latches, keys and hinges for different types of enclosures. They are made of die-cast zinc, which guarantees excellent material precision and durability.

Product documents:

Enclosure latches

Compression latch PG 13,5 Zn

Compression latch PG 13,5 is equipped with 5 mm closing range. Bodies of latches are made of zinc and plated with nickel. Cam is made of zinc-coated steel. Sealing is ensured with an O-ring.
